

Press the easy way, at the end of your limbs

Because this press attaches to the ends of the limbs it

Presses all bows no matter what its limb configuration, split, parallel, solid, and everything else
Presses the entire limb using only a fraction of the force other presses use
Presses from outside the bow offering greater safety and access
Provides total control over the pressing process. And presses both sides of the limb equally

Simple and quick to use

Uses the same procedure to press all bows. Requires no assembly or adapters
Presses with sights and stabilizer attached

Protects your bow

Uses less force than other bow presses. All contact points are rubber coated. Does not attach to the riser, Does not use cables
Presses down the center of your limbs

Has greater capabilities than any other press

Presses bows up to 95 pounds
Weighs less than 25 ounces
Has over 7 inches of travel so you can change limbs.
Carry pouch available

The Nite Hawk Press is the most versatile and easiest press to use. It has

adjustable pin placements to adapt to the thickness and angle of the limbs. (1)

adjustable pressure points to work around any limb attachments. (2)

adjustable end stops to allow for cam stops. (3)

This allows you to easily work around any kind of limb attachments.

By both pressing at the tips of the limbs and through the center of the limbs it reduces the force needed to press a bow.

1. 2. 3.

These feature also insure that both sides of your limbs are pressed equally and the intire limb is flexed, not just part of the inside of the limbs.

If you do not press the intire limb you risk over pressing your limbs and causing fractures lengthways inside your limbs. This is why the Nite Hawk Press is so much easier on your bow.
